Tools for Building Knowledge Graphs

1. Protégé

Protégé is an open-source ontology editor used to build knowledge graphs.

Features:

- Ontology creation
- RDF and OWL support
- Visualisation support

2. Apache Jena

Apache Jena is a Java framework for semantic web applications.

Features:

- RDF storage
- SPARQL query execution
- Ontology handling

3. Neo4j

Neo4j is a graph database used for storing connected data.

Features:

- Graph visualization

- Cypher query language
- Relationship management

4. RDFLib

RDFLib is a Python library used for RDF manipulation.

Features:

- SPARQL querying
- RDF graph creation
- Triple storage
